## Testing / QA Checklist

Plan/allocate time for QA/Testing

### Proofreading / Quality Check

- Proofread all text in site, including navigation elements, headers, footers and form elements (and form auto-replies), as well as photo captions.
- Designers check layout integrity and image quality, including responsive layouts on multiple screen sizes
  - Either resize browser to desired screen size, or
  - In Google Chrome, select menu > More Tools > Dev Tools, and click on mobile phone icon in menu bar. You can then select different mobile screen sizes (see screenshot on last page of this document)

## Browser/Device Testing

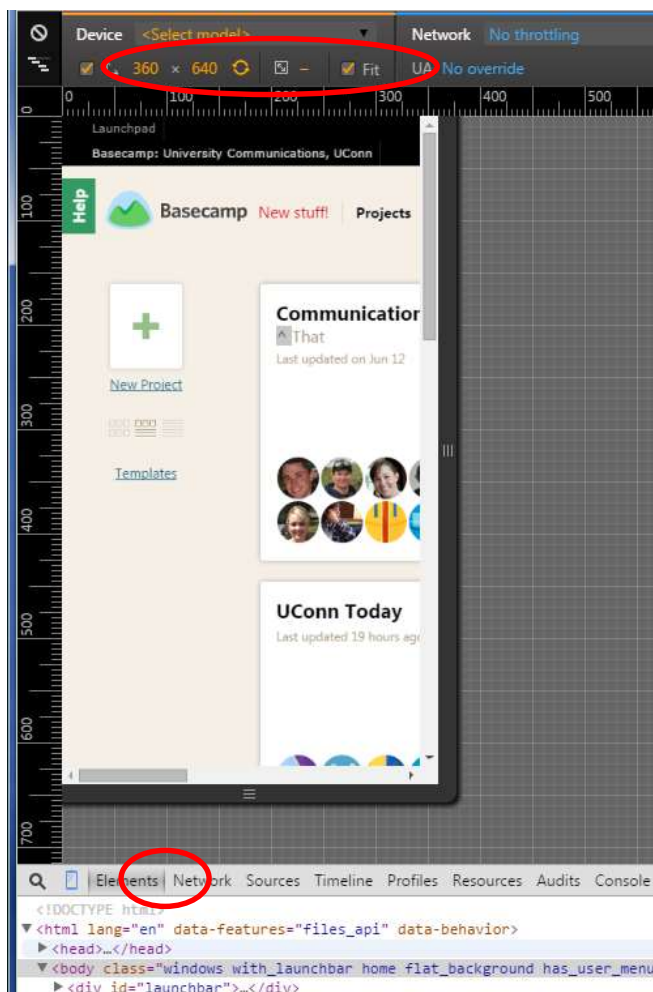

- Use BrowserStack to Test (<http://www.browserstack.com/start>)
- Browser testing: Firefox Mac/Win (2 latest versions)
- Browser testing: Chrome Mac/Win (2 latest versions)
- Browser testing: Safari Mac (2 latest versions)
- Browser testing: IE Win (8, 9, 10, 11)
- Browser testing: IE Win (6,7) Fallback (to mobile?)

## Quality Assurance Testing

- Web Form & email delivery testing
- Functionality testing
- Link checking (see <http://validator.w3.org/checklink>)

## Accessibility Checklist

- Hyperlinks to downloadable files contain text description, file size and file type (State)
- End all sentences, headers, list items, etc. with a period or other suitable punctuation. (State)
- One hyperlink per line, when possible (State)
- Use text to represent text. Not images (State)
- Meaningful and descriptive text for hyperlinks, don't use short hand, e.g. "click here"; instead "Follow this link to our News Page". (State)
- Alt attribute on all images (State)
- Text can be clearly read at any location against the background (State)
- Text transcriptions of all video clips (State)
- Captions or text tracts with a description or sounds of the movie (State)

Google Chrome Dev Tools
